

SUHAIMA AHMAD

+1(437) 383-3035 | Toronto, ON | suhaima.ahmad@utoronto.ca | [LinkedIn](#) | [Portfolio](#)

SKILLS

Languages: Python, C, Java, JavaScript, TypeScript, SQL, Bash
Frameworks & Tools: Next.js, React, Node.js, REST APIs, Prisma ORM, Firebase, JWT
DevOps & Other: Git, Linux, GitHub Actions, Docker, AWS, CI/CD, Jira

EDUCATION

HBSc Computer Science and Mathematics, University of Toronto CGPA: 3.75/4.00
Relevant Coursework: Software Engineering, Operating Systems, Algorithms, Data Structures.
Expected: April, 2028, Dean's List Scholar, UTM Entrance Award.

EXPERIENCE

Teaching Assistant Aug 2025 - Present
University of Toronto, MCS Department *Mississauga, ON*

- Supported **160+ students** in **Intro to Computer Science Part 2** through object-oriented design instruction.
- Led weekly calculus tutorials for **35+ students**, reinforcing technical concepts through guided problem solving.
- Evaluated over **600 assessments** while maintaining grading accuracy and meeting academic deadlines.
- Assisted students during office hours by debugging code and clarifying technical concepts.

Web3 Security Data Analyst Jul 2024 - Aug 2024
Webacy *United States (remote)*

- Analyzed **5,000+** blockchain transactions using **Python** and **Excel** to identify security risks.
- Evaluated nearly **1000 smart contracts** using statistical analysis to improve risk detection accuracy.
- Automated data extraction and visualization workflows with **Python scripts**, saving **4 hours** per week.
- Generated security insights through trend and anomaly analysis across multiple blockchain ecosystems.

PROJECTS

Evntly | [GitHub](#) | [Demo](#) Jan 2026

- Built a full-stack event aggregation platform using **React**, **Next.js**, and **TypeScript** in a **7-person team**.
- Designed **RESTful APIs** to aggregate, normalize and serve event data across multiple services.
- Modeled and stored event data using **PostgreSQL** with **PostGIS**, enabling location-based querying.
- Integrated **Firebase (Firestore + Auth)** for real-time features and user authentication.
- Containerized application services using **Docker** and implemented **CI/CD automation** with **GitHub Actions** to streamline testing and deployment workflows.

Food Predictor | [GitHub](#) April 2025

- Developed a **logistic regression** model in **Python** to predict food preferences, achieving **84%** test accuracy.
- Improved model performance through **feature engineering** and evaluation using **NumPy** and **pandas**.
- Built a data analysis pipeline to clean, transform and process survey datasets for supervised machine learning.
- Used **Tensorflow** to experiment with and compare results of multiple models.

News Magazine | [GitHub](#) June 2026

- Built a news aggregation web app using **React** and **Bootstrap**, enabling users to explore news across categories.
- Integrated a third-party **News API** to fetch and display real-time news through reusable React components.
- Deployed the application on **Vercel** with automated **GitHub** deployments.

COMMUNITY SERVICE

- Earned the **Duke of Edinburgh Award (Bronze, Silver, Gold)** by completing multi-year commitments in community service, expedition planning, physical activity, and skill development, demonstrating sustained **leadership, teamwork, and time management**.
